Lost Vanguard

ORIGINAL MILITARY SCIENCE FICTION / EARLY PROTOTYPE

A soldier built by the enemy wakes inside his destroyed ship, days after an attack he cannot remember. With his damaged robot companion, he fights through the wreck and investigates a war whose true cause humanity does not understand.

USER-SUPPLIED VISUAL REFERENCE. Intended atmosphere, not current gameplay or finished game art. Final designs and sky details remain open.

A world to uncover

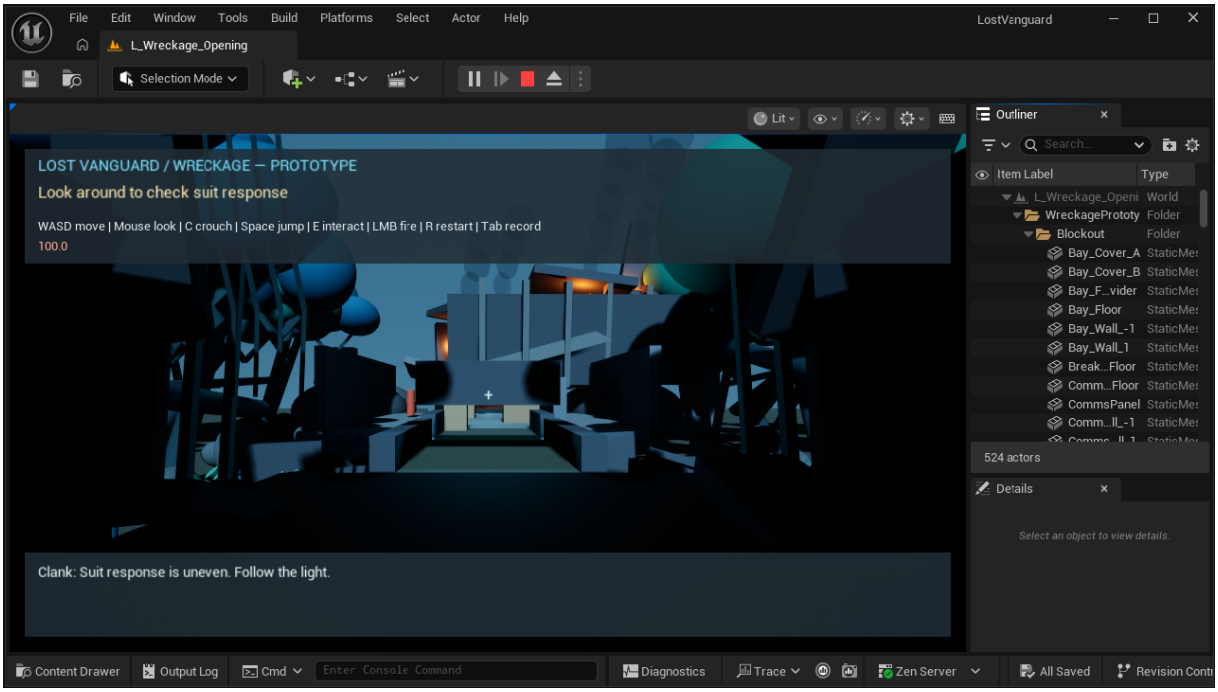

Orison holds technology left by an extinct civilization. Humanity is at war with an alien species while the escaped AI Meridian threatens both sides. Missions combine military action, exploration, and evidence that changes what the player understands.

The people at its center

Evan is a restrained Praetorian leader, created through forced enemy experiments and later rescued by humans. Clank is his small robot companion and best friend, surviving with EMP-damaged memories. Major Lena Cross and Commander Dorian Vale are separate supporting officers whose exact roles are still being developed.

From idea to playable

WHAT EXISTS NOW / WHAT COMES NEXT

ACTUAL UNREAL EDITOR PLAY SCREENSHOT. Simple shapes represent the wreck and forest while the route and gameplay are developed.

The first mission

Free Evan from debris, follow Clank's recovery checks, collect a weapon, defeat wreck searchers, recover a search record, and restore communications. The tutorial checks a trained soldier's condition while teaching the controls.

Current progress

A saved first-level prototype includes these interactions, damage, restart, and a gated exit. Its baseline passed 19 recorded automated editor play checks. A separate opening map explores the visual reference; its full route verification was still pending in the visual build report. Art, voices, combat balance, physical controls, and performance need further work. No packaged game is ready.

The next step

Make one convincing opening, then replace placeholders with reusable assets and develop voices and animation. The proposed story continues through a rally point, enemy relay, research archive, and departure record. Those later missions are drafts. AI assists production; creative decisions stay with the project creator.

FEEDBACK: Does the opening make you want to learn what happened? Which character or part of the world interests you most?
